

Important Information

The fund invests primarily in fixed and floating rate securities denominated in USD.

- The fund invests in debt securities which may be subject to interest rate, credit and counterparty risks and risk relating to below investment grade and unrated debt securities, etc.
 - Investment in sovereign debt obligations which may expose the fund to political, social and economic risks. The fund may suffer significant losses upon defaults by government entities.
 - Debt instruments with loss-absorption features may be subject to greater risks of being partly or wholly written off or converted into the issuer's equity upon the occurrence of a predefined trigger event (e.g. when the issuer, or the resolution entity if the issuer is not a resolution entity, is near or at the point of non-viability; or when the issuer's capital ratio falls to a specified level).
 - The fund may invest in mortgage related and other asset backed securities that may be subject to greater interest rate, credit and liquidity risks compared to other debt securities.
 - The fund invests in concentrated region and subjects to higher level of risks than a fund investing in a more diversified portfolio/strategy.
 - The fund may use derivatives to meet its investment objective. Derivatives exposure may involve higher credit risk and counterparty risk, liquidity risk and valuation risk. In adverse situations, the fund may suffer significant losses from their derivative usage for hedging.
 - For distribution share classes/units, the distribution rate is not guaranteed. Distribution yield is not indicative of the return of the fund. Distributions may be paid out of the capital of the fund at the Manager's discretion. This amounts to a return or withdrawal of part of the amount you originally invested or capital gains attributable to that and may result in an immediate decrease in the net asset value per share or decrease in the value of units of the relevant Distribution Units.
- You should not make any investment decision solely based on this document. Please read the relevant offering document carefully for further fund details including risk factors.

Investment Objectives

The Fund aims to provide income and capital growth in excess of the Bloomberg US Aggregate Bond (TR) index after fees have been deducted over a three to five year period by investing in fixed and floating rate securities denominated in USD.

Schroders Schroder International Selection Fund US Dollar Bond

A Accumulation USD | Data as at 31.10.2023

Return of USD 10,000

Past Performance is not a guide to future performance and may not be repeated. The value of investments and the income from them may go down as well as up and investors may not get back the amounts originally invested. Exchange rate changes may cause the value of any overseas investments to rise or fall. Performance data does not take into account any commissions and costs, if any, charged when units or shares of any fund, as applicable, are issued and redeemed.

The chart is for illustrative purposes only and does not reflect an actual return on any investment.

Returns are calculated NAV to NAV (which means performance does not include the effect of any initial charges), net income reinvested, net of fees.

Benchmark and corporate action information

The fund's performance should be assessed against its target benchmark being to exceed the Bloomberg US Aggregate Bond (TR) index and compared against the Morningstar USD Diversified Bond Category. The fund's investment universe is expected to overlap to a limited extent with the components of the target benchmark. However, the fund will likely reflect certain features of the target benchmark (namely currency exposure). The comparator benchmark is only included for performance comparison purposes and does not have any bearing on how the investment manager invests the fund's assets. The investment manager invests on a discretionary basis and there are no restrictions on the extent to which the fund's portfolio and performance may deviate from the target benchmark. The investment manager will invest in companies or sectors not included in the target benchmark in order to take advantage of specific investment opportunities. The target benchmark has been selected because it is representative of the type of investments in which the fund is likely to invest and it is, therefore, an appropriate target in relation to the return that the fund aims to provide. The comparator benchmark has been selected because the investment manager believes that the benchmark is a suitable comparison for performance purposes given the fund's investment objective and policy. The benchmark(s) does/do not take into account the environmental and social characteristics or sustainable objective (as relevant) of the fund.

The Fund has environmental and/or social characteristics (within the meaning of Article 8 SFDR).
